

## Corona Comeback of Egypt's Dolphins (7m)

During the corona pandemic, the Indo-Pacific bottlenose dolphins are getting a break from tourism disturbance at certain reef areas usually very popular for "swimming with dolphin" programs. The dolphins use these particular areas for sleeping/resting and socializing

## Eating up Easter (30m) Exclusive Tour Edit

Eating Up Easter follows a modern indigenous community transforming under the globalizing effects of tourism. Previous films have often sensationalized the "mysteries" of Easter Island's past, a remote Pacific Island known for its massive stone statues. In contrast, this documentary by native Rapanui filmmaker Sergio Mata'u Rapu, provides an intimate look into the passion and creativity his people are harnessing to face the consequences of their rapidly developing island.

## Singlehanded (8m)

A solo-circumnavigation is a daunting challenge for just about any sailor, let alone a sailor who happens to be a double amputee. *Singlehanded* takes us through the waters of Antarctica and the infamous Drake Passage (considered one of the most treacherous sailing destinations in the world) with Dustin Reynolds, the survivor of a life-altering accident who has sailed more than 20,000 miles alone over the past five years.

## Under the Ice of the Antarctica (10m)

While working as a dishwasher at McMurdo Station, Antarctica, Rachel Heckerman serendipitously befriended a team of scientists and scuba divers, who offered her the chance to experience life in Antarctica through their eyes. Not knowing you could scuba dive on this continent, nor knowing that sea spiders are a species that exist, she wanted to share their story with the world from the most unique and isolated continent on earth. Based on the research of Amy Moran from the University of Hawaii.

## A Life of Endless Summers (13m) Exclusive Tour Edit

A Life of Endless Summers is the exclusive retrospective story on Bruce Brown's life told by the one who knew him best, his son Dana Brown. It's a story of a man, a father, a husband, a filmmaker, a pioneer, a legend - a story of a life well lived.

## The Last Vaquita (13m)

A pair of brothers head to Mexico where they join a crew of ocean conservationists who are fighting to save the most endangered marine mammal on the planet.

## Recolonizing the Elwha (8m)

Ten years ago, the world's largest dam removal began on the Elwha River, allowing salmon to recolonize their lost habitat. This is the story of the Lower Elwha Klallam Tribe's connection to that river and the hatchery that kept those salmon runs alive.

## Whales in a Changing Ocean (21m)

In Antarctica, nothing is stationary. The only constant is change. One noticeable and increasingly evident change is the recovery of the humpback whales that feed in the waters off the Antarctic Peninsula, after industrial whaling almost wiped them out. In February 2020, wildlife filmmaker Richard Sidey was invited to join a team of scientists undertaking humpback

whale research in Antarctica with Conservation International. This film follows the team as they observe humpback whale behavior and gather information vital to protecting the Antarctic continent into the future.
